(54) Title: COMPOSITIONS AND METHODS FOR TREATMENT OF CRYPTOCOCCOSIS

(57) Abstract: The invention described herein provides human antibodies produced in non human animals that specifically bind to Cryptococcus neoformans capsular glucuronoxylomannan (GXM). The invention further provides methods for making the antibodies in a non-human animal and for expressing the antibodies in cells including hybridomas and recombinant host cell systems. Kits and compositions comprising the antibodies are also provided in addition to methods of diagnosing, treating, inhibiting or preventing C. neoformans infection or conditions or disorders caused by such infection by administering to a patient the antibodies or compositions described herein.

emational application No. PCT/US2004/014276

| Box II Observations where certain claims were found unsearchable (Continuation of Item 2 of first sheet) |
|--|
| This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons: |
| 1. X Claims Nos.: 2, 9-11 because they relate to subject matter not required to be searched by this Authority, namely: |
| Although claims 35-40 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition. |
| Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically: |
| |
| 3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a). |
| Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet) |
| This International Searching Authority found multiple inventions in this international application, as follows: |
| see additional sheet |
| As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims. . |
| 2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee. |
| 3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.: |
| 4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-11,24-43(all in part); 16-19(in full) |
| Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees. |

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-11, 24-43(all in part) and 16-19 (in full)

Invention 1 relates to a human monoclonal antibody or antigen-binding portion thereof; its variable light chain polypeptide and CDRs 1-3 characterized by SEQ. IDs. 5-8 respectively and nucleic acid sequences encoding said respective polypeptides characterized by SEQ. IDs. 17-20; its variable heavy chain polypeptide and CDRs 1-3 characterized by SEQ. IDs. 47-50 respectively and nucleic acid sequences encoding said respective polypeptides characterized by SEQ. IDs. 35-38 respectively; the cell line producing said antibody named G15B4G5 (ATCC PTYA-5171); a host cell transformed with said nucleic acid molecules; the method of producing said monoclonal antibody by culturing said transformed host cell; composition and kit comprising said antibody and method for the treatment of for the prevention of Cryptococcosis using said monoclonal antibody.

2. claims: 1-11, 24-43 (all in part) and 12-15 (in full)

Invention 2 relates to a human monoclonal antibody or antigen-binding portion thereof; its variable light chain polypeptide and CDRs 1-3 characterized by SEQ. IDs. 1-4 respectively and nucleic acid sequences encoding said respective polypeptides characterized by SEQ. IDs. 13-16; its variable heavy chain polypeptide and CDRs 1-3 characterized by SEQ. ID. 43-46 respectively and nucleic acid sequences encoding said respective polypeptides characterized by SEQ. IDs. 31-34 respectively; the cell line producing said antibody named G14F7E5 (ATCC PTYA-5170); a host cell transformed with said nucleic acid molecules; the method of producing said monoclonal antibody by culturing said transformed host cell; composition and kit comprising said antibody and method for the treatment of for the prevention of Cryptococcosis using said monoclonal antibody.

3. claims: 1-11, 24-43(all in part) and 20-23 (in full)

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Invention 3 relates to a human monoclonal antibody or antigen-binding portion thereof; its variable light chain polypeptide and CDRs 1-3 characterized by SEQ. IDs. 9-12 respectively and nucleic acid sequences encoding said respective polypeptides characterized by SEQ. IDs. 21-24; its variable heavy chain polypeptide and CDRs 1-3 characterized by SEQ. IDs. 51-54 respectively and nucleic acid sequences encoding said respective polypeptides characterized by SEQ. IDs. 39-42 respectively; the cell line producing said antibody named G19B9G7 (ATCC PTYA-5172); a host cell transformed with said nucleic acid molecules; the method of producing said monoclonal antibody by culturing said transformed host cell; composition and kit comprising said antibody and method for the treatment of for the prevention of Cryptococcosis using said monoclonal antibody.
